WASTE RECYCLING & RECOVERY POLICY

At Kenny Waste Management Ltd we take seriously the impact that waste can have on the environment, we have a corporate & social responsibility as waste carriers to manage the waste we receive off our customers, we meet those obligations in full by ensuring that best environmental practices are used at all stages of our involvement.

Our company ethos is to Recover, Recycle, and Divert from Landfill.

In doing so we help to lessen the environmental impact of the waste produced in everyday life by consumers and business alike.

We manage the reduction of land filling by constantly refining the sorting and recycling processes we employ. We also constantly update and add to the plant and machinery we utilise in order to keep pace with the latest technological advancements available in the marketplace.

The above combined efforts ensure that waste minimisation, measured in terms of tonnes to landfill, is kept to a very acceptable level in terms of Environment Agency guidelines for an operation of our size.

We are however constantly striving to reduce even further the tonnes to Landfill, and have set ourselves a target as an organisation to be a Zero Landfill Waste Management Company through 2010.

NEIL MACKEY
Managing Director
